Question	Answer
1. What is the main purpose of the study?	To investigate the effect of the new curriculum on the learning outcomes of the students.
2. What are the research objectives?	To compare the learning outcomes of the students who were taught using the new curriculum with those who were taught using the old curriculum.
3. What is the research hypothesis?	The students who were taught using the new curriculum will have higher learning outcomes than those who were taught using the old curriculum.
4. What is the significance of the study?	The study is significant because it will provide information about the effectiveness of the new curriculum and help to make decisions about whether to implement it on a larger scale.
5. What is the scope of the study?	The study is limited to the learning outcomes of the students in the first semester of the new curriculum.
6. What are the limitations of the study?	The study is limited by the sample size and the duration of the study.
7. What are the findings of the study?	The findings of the study show that the students who were taught using the new curriculum had higher learning outcomes than those who were taught using the old curriculum.
8. What are the conclusions of the study?	The conclusion of the study is that the new curriculum is more effective than the old curriculum.
9. What are the recommendations of the study?	The study recommends that the new curriculum be implemented on a larger scale.
10. What are the implications of the study?	The study has implications for the future of education and for the development of the curriculum.

Question	Answer
1. What is the main purpose of the study?	The main purpose of the study is to investigate the effect of the independent variable on the dependent variable.
2. What are the independent and dependent variables?	The independent variable is X, and the dependent variable is Y.
3. What is the research hypothesis?	The research hypothesis is that there is a significant positive relationship between X and Y.
4. What is the significance level?	The significance level is set at 0.05.
5. What is the sample size?	The sample size is 100.
6. What is the data source?	The data source is a primary survey conducted among the target population.
7. What is the data collection method?	The data collection method is a self-administered questionnaire.
8. What is the data analysis method?	The data analysis method is multiple regression analysis.
9. What are the findings of the study?	The findings of the study show that there is a significant positive relationship between X and Y.
10. What are the conclusions of the study?	The conclusions of the study are that the independent variable has a significant positive effect on the dependent variable.
